## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. (Original) Magnetron coating system, comprising
  - A first coating source (5)
  - An auxiliary substrate (2) arranged between this first coating source and the area that is provided for receiving the substrate (1) to be coated
  - A magnetron (3), whereby the auxiliary substrate (2) forms a cathode for this magnetron
  - Means for determining the area density (6) of the auxiliary substrate
     (2).
- (Original) Magnetron coating system according to claim 1, characterized in that the auxiliary substrate is embodied cylindrically and the magnetron is a rod cathode magnetron.
- (Currently Amended) Magnetron coating system according to one of claims 1 or 2 claim 1, characterized in that the first coating source is a planar magnetron.
- 4. (Currently Amended) Magnetron coating system according to one of claims 1 through 3 claim 1, characterized in that the first coating source has a shield (4).

P29662.A01 Customer No: **07055** 

5. (Currently Amended) Magnetron coating system according to one of claims 1 through 4 claim 1, characterized in that the means for determining the area density (6) contain a device for determining the x-ray fluorescence.

- 6. (Currently Amended) Magnetron coating system according to one of claims 1 through 5 claim 1, characterized in that the magnetron (2, 3) has several cathodes, each of which contains an auxiliary substrate (2).
- 7. (Original) Method for depositing thin layers, in which a layer is deposited on an auxiliary substrate by means of a first coating source, and this auxiliary substrate is used as a cathode for coating a substrate by means of a magnetron and the area density of the auxiliary substrate is determined.
- 8. (Original) Method according to claim 7, characterized in that the deposited layer thickness on the auxiliary substrate is less than 100 nm.
- 9. (Original) Method according to claim 8, characterized in that the deposited layer thickness on the auxiliary substrate is less than 10 nm.
- 10. (Currently Amended) Method according to one of claims 7 through 9 claim 7, characterized in that the deposited layer is a metal layer.
- 11. (Original) Method according to claim 10, characterized in that the metal layer comprises mainly an element that has a higher mass number than the average mass number of the material of the auxiliary substrate.

P29662.A01 Customer No: **07055** 

12. (Currently Amended) Method according to one of claims 7 through
11 claim 7, characterized in that the operation of the first magnetron takes
place with inert gas and the operation of the second magnetron takes
place with inert and/or reactive gas.

- 13. (Original) Method according to claim 12, characterized in that the inert gas contains argon and/or the reactive gas contains nitrogen and/or oxygen and/or methane.
- 14. (Currently Amended) Method according to ene of claims 7 through
  13 claim 7, characterized in that the area density is determined on the
  auxiliary target after this has been used as cathode for coating a substrate
  by means of a second magnetron.
- 15. (Currently Amended) Method according to one of claims 7 through

  14 claim 7, characterized in that the area density of the auxiliary target is
  determined by means of x-ray fluorescence.
- 16. (Currently Amended) Method according to one of claims 7 through

  15 claim 7, characterized in that the magnetron (2, 3) is operated with DC voltage or pulsed DC voltage.
- 17. (Currently Amended) Method according to one of claims 7 through
  16 claim 7, characterized in that the magnetron (2, 3) is operated as a
  magnetron having several cathodes with a frequency of approx. 10 kHz to
  approx. 100 kHz.

18. (Currently Amended) Method according to one of claims 7 through

17 claim 7, characterized in that a layer is deposited on the substrate,
which layer contains titanium dioxide.
